SPECIFIC COMMENTS TO AUTHORS

I thoroughly review this manuscript and found it comprehensive and very well written. The review aims to evaluate the epidemiological and clinical characteristics of DIS and suggest some pathophysiological mechanisms for this ADR. This data may be significant for researchers in the field to advance this area of research further. Based on my evaluation, I am recommending this manuscript after minor polishing of the English language.

SPECIFIC COMMENTS TO AUTHORS

In the manuscript entitled "Drug-induced stuttering: a review of the literature". the authors describe the potential mechanisms of developmental stuttering. The review covers full of interesting observations, and clearly describes and evaluates the epidemiological and clinical characteristics of Drug-induced stuttering (DIS) and suggests some pathophysiological mechanisms for the adverse drug reaction (ADR). In overall, the review is crucial for further understanding the adverse effects of the drugs triggering DIS. In conclusion, I strongly recommend this review for publication on BPG.
