Preliminary results of binding pancreaticojejunostomy

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4492331>

INTRODUCTION. Pancreaticoduodenectomy (PD) is the treatment of choice for peripapillary cancer (pancreatic head cancer, distal common bile duct cancer, duodenum third portion cancer, ampulla of Vater cancer, etc.). 1, 2 Pancreatic fistula (PF) is the most common and most serious complication after PD. 3, 4, 5 As the postoperative morbidity and clinical course are determined by the development ...

Operative methods of pancreaticojejunostomy: One hundred and twenty mongrel dogs were used to evaluate three kinds of pancreaticojejunostomy in terms of microangiography, hydroxyproline content, histopathological findings, bursting strength of the anastomotic site and incidence of anastomotic leakage. Pancreatic function was assessed by intravenous glucose tolerance test and pancreozymin ...

Jan 21, 2008 · Experimental study on operative methods of pancreaticojejunostomy with reference to anastomotic patency and postoperative pancreatic exocrine function. ... Pancreatic leakage is the most common and severe postoperative complication[1 ... and a mucosa-to-mucosa pancreaticojejunostomy is the best choice for anastomotic patency, when compared with ...

### [A new pancreaticojejunostomy technique: A battle against ...](#)

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC3718903>

Jul 21, 2013 · METHODS: We present an end-to-side, duct-to-mucosa pancreaticojejunostomy with seromuscular jejunal flap formation, and the insertion of a silicone stent. This technique was performed in thirty-two consecutive patients who underwent a pancreaticoduodenectomy procedure by the same surgical team, from January 2005 to March 2011.

Aim: The purpose of this study is to find a better operative technique by comparing interrupted stitches with continuous stitches for the outer layer of the pancreaticojejunostomy, i.e. the stitches between the stump parenchyma of the pancreas and the jejunal seromuscular layer, and other risk factors for the incidence of pancreatic leakage.

<https://pubmed.ncbi.nlm.nih.gov/31436243>

**Purpose:** Postoperative pancreatic fistula (POPF) after pancreaticoduodenectomy (PD) is a worrisome and life-threatening complication. This study aimed to investigate the risk factors and preventive strategies for POPF after PD. **Materials and methods:** We retrospectively reviewed 301 consecutive patients who underwent PD at our hospitals between January 2011 and December 2017.
