## **SINGLE-FRACTION STEREOTACTIC ABLATIVE BODY RADIATION THERAPY FOR PRIMARY AND METASTASIC LUNG TUMOR: A NEW PARADIGM?**

This article was translated into English by Caroline Coope.

Caroline Coope is a native English speaker from the United Kingdom and has been living and working in Spain for more than twenty-five years. She is currently working as a teacher of English for medical, pharmacy and technical sciences at San Pablo Ceu University in Madrid where she has been teaching for over fifteen years.

She has been working as a translator specialized in medicine and science for more than twenty years. Her clients include physicians from the main hospitals in Madrid and researchers from different faculties of Spanish universities and research institutions, such as the prestigious centers of the Consejo Superior de Investigacion Cientifica (CSIC).

She is officially registered as a translator in the Spanish Inland Revenue.
