

Answers to reviewers

We thank the reviewers for their comments. We have tried to address recent progress in the field by citing novel therapeutic strategies such as microRNAs, direct differentiation, and extracellular vesicles. We acknowledge that the maturation of cardiomyocytes derived from iPS is a challenge to the field. We added a paragraph on this subject referencing the reader to one of the many reviews that deal with this subject (this new paragraph is marked in red). Regarding the English revision to improve readability, we have thoroughly revised the English, and we firmly believe that the language is much improved.
