SPECIFIC COMMENTS TO AUTHORS

The new surgical approach is certainly novel. I have the following concerns and recommendations

1. Please have the manuscript proof read to correct the english language grammatical errors
2. It would add value to the manuscript if the authors could mention how they treated the ipsilateral proximal humerus fracture? Same setting? Position and approach?
3. I would also recommend adding a lit more details about what the authors mean by wire anchor fixation? Also please mention the size and number of cannulated screws.
4. Did this patient have a shoulder dislocation? On the x ray images, the glenoid fracture appears very similar to bony bankart.
