[Infected \("Mycotic"\) coronary artery aneurysm: Systematic ...](https://pubmed.ncbi.nlm.nih.gov/30711513)  
<https://pubmed.ncbi.nlm.nih.gov/30711513>

Background: Infected coronary artery aneurysms (ICAA) represent a rare but potentially fatal complication of pre-existent atherosclerotic or non-atherosclerotic coronary artery disease, percutaneous coronary artery intervention, endocarditis or extracardiac infection. Methods: A retrospective analysis of four cases in addition to 51 infected coronary artery aneurysms from the ...

Oct 01, 2006 - Coronary artery ectasia (CAE) is found in 0.3–5% of patients undergoing coronary angiography. Atherosclerosis is the main cause, followed by Kawasaki disease and infectious emboli. The exact pathogenesis has not been diagnosed as yet, but an inflammatory process is underlying. Symptoms, if present, are usually related to myocardial ischemia.
