Manifestation of severe pneumonia in anti-PL-7 Ant synthetase syndrome and B cell lymphoma: A case report

Anti-PL-7 Ant synthetase syndrome and B cell lymphoma

Abstract

BACKGROUND

Antisynthetase syndrome (ASS) is characterized by the presence of antisynthetase antibodies coupled with clinical findings such as fever, polymyositis-dermatomyositis (PM/DM) and interstitial lung disease. It is, however, rare to observe ASS association with B cell lymphoma presenting severe pneumonia as the first clinical manifestation.

CASE SUMMARY

We evaluated a 50-year-old male patient who presented with cough with sputum
