SPECIFIC COMMENTS TO AUTHORS

This is an interesting case report of a 76-year-old patient with bladder cancer who had serious comorbidities. This case report is very well described, and well discussed. This case has achieved relapse-free survival. The favorable clinical course and outcome suggest that carbon ion radio therapy might allow us to avoid resection and was well tolerated with curative outcomes. Minor comments: 1. Some minor language polishing should be corrected. Such as, last sentence of introduction “we present 1 case of a bladder..” should be “we present 1 case of a bladder” 2. The conclusion can be revised. The conclusion section should begin from “In summary, the present study shows that CIRT.....” and end at “this may lead to a higher probability of achieving tumor control with a lower rate of postradiation morbidities.” The “Conclusion” now is repeated, please delete it or make a revision.
