Manuscript NO: 65507

First of all, thank you for your careful guidance of this article. Revision has been made according to the suggestions of the reviewer:

Reviewer: 06058624

This is an interesting case report of a 76-year-old patient with bladder cancer who had serious comorbidities. This case report is very well described, and well discussed. This case has achieved relapse-free survival. The favorable clinical course and outcome suggest that carbon ion radio therapy might allow us to avoid resection and was well tolerated with curative outcomes. Minor comments: 1. Some minor language polishing should be corrected. Such as, last sentence of introduction “we present 1 case of a bladder..” should be “we present 1 case of a bladder” 2. The conclusion can be revised. The conclusion section should begin from “In summary, the present study shows that CIRT.....” and end at “this may lead to a higher probability of achieving tumor control with a lower rate of postradiation morbidities.” The “Conclusion” now is repeated, please delete it or make a revision.

Thank you for your advice.

After receiving the comments, we read the article carefully and found some small loopholes in the language of the article and made modifications. We edited the conclusion. And I changed the style of the references

Thank you again for publishing our manuscript in the World Journal of Clinical Cases.

Sincerely Yours,

Yanshan Zhang
