SPECIFIC COMMENTS TO AUTHORS

The authors present a very unusual topic. This implies that there are few references to compare results. At the same time, it is a strength for the manuscript because it adds knowledge to something unusual. It is the presentation of a case. The objective is to provide information on a little-studied topic. The authors do this, thus meeting the objective of the study. Many studies of this type are needed to describe the characteristics of this pathology. It's the beginning of a long road. All the principles are important, so I think it should be published.
