Cognitive Attentional Syndrome and Metacognitive Beliefs ...

<https://journals.sagepub.com/doi/full/10.1177/1557988316652936>

Jun 08, 2016 · Metacognitive beliefs may be defined as the information individuals hold about their own cognition and the coping strategies that affect it. Particular metacognitive beliefs lead to the activation of CAS and interfere with emotion down-regulation (Wells, 2000). Examples of metacognitive beliefs may include "worrying will help me to cope" or "my thoughts are out of control."

Nov 30, 2013 · Rumination and worry are fundamental metacognitive strategies within Wells's theory. As is described in more detail below, metacognitive beliefs and metacognitive strategies are especially important facets of metacognition associated with the CAS. Wells (2009) developed metacognitive therapy as a way to mitigate negative effects of the CAS. Prominent intervention strategies within Wells's therapy ...

Metacognitive therapy

Metacognitive therapy is a psychotherapy focused on modifying metacognitive beliefs that perpetuate states of worry, rumination and attention fixation. It was created by Adrian Wells based on an information processing model by Wells and Gerald Matthews. It is supported by scientific evidence from a large number of studies.
