This is a case report of a 78-year-old male patient was presented with a soft mass with a rapid growth. The patient underwent a left knee joint mass resection and the first histopathological examination showed a MPNST with positive surgical margins. This case is well presented. It makes important points which are widely applicable. I enjoyed reviewing it

Thank you.

I have reviewed the Peer-Review Report, the full text of the manuscript, and the relevant ethics documents, all of which have met the basic publishing requirements of the World Journal of Clinical Cases, and the manuscript is conditionally accepted. I have sent the manuscript to the author(s) for its revision according to the Peer-Review Report, Editorial Office's comments and the Criteria for Manuscript Revision by Authors. The title of the manuscript is too long and must be shortened to meet the requirement of the journal (Title: The title should be no more than 18 words).

Thank you.

We shortened the title to Malignant peripheral nerve sheath tumor in an elderly patient with superficial spreading melanoma: A case report. We also modified the title in the COPYRIGHT LICENSE AGREEMENT file and then signed.
