

## **ANSWERING REVIEWERS**

### **Dear Reviewers,**

I am grateful to you the great review. Below are the answers to the issues raised.

- 1) We need to see all figures and the table that you mention in the manuscript.
  - a. I have added all the figures.
- 2) Minor lingual correction by a native speaker before it can be accepted as there are mistakes throughout the whole manuscript.
  - a. Sorry for the mistakes. I have corrected the mistakes using the “Grammarly Premium”.
- 3) Please include in the references a recent published case from European Heart Journal-case reports about RA myxoma embolization (DOI: 10.1093/ehjcr/ytaa476) and mention these findings in "obstruction" and "embolization" section.
  - a. The paper has been included in “embolization" section.
- 4) In investigation and echocardiography, it is very important to comment on contrast echocardiography for differentiation of myxomas from thrombi and add the proper references.
  - a. Thank you very much for the suggestion. A section has been added in to the “Investigation” section, and 3 references have been included accordingly.
- 5) Include references in your introduction part.
  - a. Done accordingly.
