Dear editor:

**Title: Comparison of ocular axis and corneal diameter between entropion eyes and non-entropion eyes in children with congenital glaucoma**

Yue Wang, ZhiJia Hou, HuaiZhou Wang, Man Hu, YuXin Li, Zheng Zhang

Name of Journal: World Journal of Clinical Cases

Manuscript NO: **66135**,

Retrospective case analysis and self-control study

First of all, we would like to express our sincere gratitude to the reviewers for their constructive and positive comments. Also, thank you for your careful guidance of this article. Revision has been made according to the suggestions of the reviewer.

Reviewer #1:

**Scientific Quality:** Grade B (Very good)

**Language Quality:** Grade B (Minor language polishing)

**Conclusion:** Minor revision

**Specific Comments to Authors:** This is an interesting retrospective study of the ocular axis and corneal diameter between entropion eyes and non-entropion eyes in congenital glaucoma children. Congenital epiblepharon is characterized by a skin fold under the orbicularis muscle that tilts the lashes, pushing them against the globe. It may cause keratopathy and astigmatism, and surgical correction is recommended. Congenital glaucoma develops within the first few years of life and may cause megalocornea, corneal edema or buphthalmos. Only a few cases of acquired lower eyelid epiblepharon have been described in patients with congenital glaucoma. This study found that the rapid growth of ocular axis and corneal diameter may be the main cause of congenital glaucoma with acquired lower eyelid entropion. This study is well designed. The results are interesting and well discussed. After a minor revision, it can be accepted. Comments: 1. Please add subtitles to the Materials and methods section. 2. Please move the tables to the end of the manuscript. 3. Some minor language polishing should be revised.

## Replies to Reviewer 1

1. Please add subtitles to the Materials and methods section.

**Response:** Thank you for your insightful suggestion. We accept the suggestion and add subtitles to the Materials and methods section. Such as “General information; Diagnostic criteria of primary congenital glaucoma; Inclusion criteria and Exclusion criteria; Main outcome measures; Statistical method”.

2. Please move the tables to the end of the manuscript.

**Response:** Yes, we move the tables to the end of the manuscript.

3. Some minor language polishing should be revised.

**Response:** We have adjusted the position and order of some paragraphs, revised and polished the text

With best wishes,  
Sincerely Yours,  
Yue Wang
