SPECIFIC COMMENTS TO AUTHORS

The paper deals with a narrative review of the literature meeting the clinical utility of GIP determination compared to the available tools in use. I read the paper with interest. It is well written, an enjoyable reading. The title is appropriate, the quality of references is high. The manuscript summarize all the existing literature on the clinical use of GIP. The conclusion is consistent with the current knowledge. I have only a few suggestion. I recommend the authors to describe their paper as a 'narrative review', and to add a table summarizing the existing studies on GIP (authors, setting and n. of participants, kind of test , outcome) which could I be very useful for the readers.

SPECIFIC COMMENTS TO AUTHORS

This is an important issue for patients and treating physicians. The review is well structured and has sufficiently considered all published data.
