SPECIFIC COMMENTS TO AUTHORS

The authors presented a rare case of PAMT in a young patient and performed ESD, I think it's acceptable to be published and maybe interest of the related readers. The language is fluently, and the paper is well organized, therefore, I would love to recommend this report been accept expect my only concern: The words may exceed the limits of a "case report", usually within 1000 words is preferred.

SPECIFIC COMMENTS TO AUTHORS

The research paper "Plexiform angiomyxoid myofibroblastic tumor of the stomach treated by endoscopic submucosal dissection: A case report and review of the literature" is interesting and brings new insights and surgical techniques. however there are some objections: 1. Authors have to better describe procedure of endoscopic submucosal dissection (ESD) as well as postoperative complications and recovery. 2. In Discussion, it is necessary to provide better insight into the current surgical techniques of treatment of PAMT.
