Dear editor,

Please find attached files of revised manuscript in word format

Title: Study on the accuracy of Ultrasonography in the diagnosis of Fetal CNS malformation

Author: Bo Pang¹, Jingjing Pan², Qin Li³, Xia Zhang⁴

Name of Journal: World Journal of Clinical Cases

Manuscript NO: 66289

First of all, thank you for your careful guidance of this article. Revision has been made according to the suggestions of the reviewer:

Reviewer: 06058952

Birth defects place heavy burdens not only on the child's family but also on society. There are many known types of birth defects, among which central nervous system malformations have a high incidence and cause great harm. Ultrasonography has many advantages, such as being a noninvasive, safe and a simple procedure. In this interesting study, the authors investigated the accuracy of ultrasonography in the diagnosis of fetal central nervous system malformation. This study is well displayed, after a minor revision, it can be accepted for publication. Comments: 1. The abstract is too long, especially the results. Please short it. Some unimportant data can be deleted. 2. The references numbers should be edited, such as, the [1-2] should be changed to [1,2]. 3. $x \pm s$? mean \pm SD? Please check and revise. 4. Some Chinese punctuations in the main text should be changed. 5. There are some minor language polishing, which should be revised.

Thank you for your advice.

After receiving the comments, we read the article carefully and found some small loopholes in the language of the article and Chinese punctuations and

made modifications. And I check and revise the "mean \pm SD". I added a background section to the abstract and cut the results in the abstract. Edited the chart. And I changed the style of the references.

According to the suggestion, we changed the relevant description.

Thank you again for publishing our manuscript in the World Journal of Clinical Cases.

Sincerely Yours,

Bo Pang
