SPECIFIC COMMENTS TO AUTHORS

This study of intravenous dexmedetomidine on postoperative bowel movement recovery after laparoscopic nephrectomy is very interesting. In this study, the laparoscopic nephrectomy was chosen to investigate postoperative gastrointestinal function recovery avoiding the gut damage itself. And the results show that the DEX could promote postoperative gastrointestinal function. This study is very well display, and the results are very interesting. The patient enrolment flow is very clear, and the excluded and include criteria are reasonable. Overall, the manuscript is well written. After some minor editing, this manuscript can be accepted for publication. Thank you very much.

SPECIFIC COMMENTS TO AUTHORS

This study is very interesting. In this study, the authors found that the DEX promote the bowel movements in patients after laparoscopic nephrectomy. The reviewer suggests the authors to make an editing of the manuscript include the language carefully.
