"Redefining NAFLD to MAFLD: Is this plausible?". The topic is within the scope of the World Journal of Hepatology. (1) Classification: Grade C (good) and A (Excellent); (2) Summary of the Peer-Review Report: This review attempted to review a status. A group of experts have a developed a consensus to upgrade the term non-alcoholic fatty liver disease (NAFLD) to metabolic associated fatty liver disease (MAFLD), suggesting that MAFLD would more accurately reflect not only the disease pathogenesis but also help in patient stratification for management of patients with NAFLD. However, difference of opinion exists which has made the NAFLD versus MAFLD debate the current talk of the town. This review will focus on the plausibility and implications of redefining NAFLD as MAFLD; (3) Format: There is no table or figure; (4) References: A total of 59 references are cited.; (5) Self-cited references:; (6) References recommendations: The authors have the right to refuse to cite improper references recommended by the peer reviewer(s), especially those published by the peer 5 / 6 reviewer(s) him/herself (themselves). If the authors find the peer reviewer(s) request for the authors to cite improper references published by him/herself (themselves), please send the peer reviewer's ID number to editorialoffice@wjgnet.com. The Editorial Office will close and remove the peer reviewer from the F6Publishing system immediately. 2 Language evaluation: Classification: Grade B and B (Minor Polishing). 3 Academic norms and rules: 4 Supplementary comments: This is an invited review. 5 Issues
