

May 1, 2021

Dear Editor,

Please find enclosed the edited manuscript in Word format (file name: 66538-review. doc).

**Title:** Spinal epidural hematoma after spinal manipulation therapy: Report of three cases and a literature review

**Author:** Hua Liu, Tao Zhang, Tao Qu, Cheng-Wei Yang, Song-Kai Li

**Name of Journal:** World Journal of Clinical Cases

**ESPS Manuscript NO:** 66538

The manuscript has been improved according to the suggestions of reviewers:

1. Format has been updated.
2. Revision has been made according to the suggestions of the reviewer

The first reviewer

The figures, especially MRI, should be revised. In figure 2 and 3, the sagittal images of MRI showed out focus from the lesions. Furthermore, the figures should have same focus and ranges for readers to compare. It would be better to be enlarged the lesion in the figure.

Thank you for the useful comments to improve the paper. Already made revisions.

The second reviewer

- (1) I'd suggested that each case is presented completely instead of breaking it into separate paragraphs. This will make the case presentation more readable.

Thank you for the useful comments to improve the paper. Already made revisions. We have tried to modify it, but we have written and uploaded each case according to the requirements of the magazine, so it may not be able to present it completely.

- (2) As for the case with hemangioma, it isn't clear whether the patient actually had it or not, and where the hemangioma was located. Moreover, the presence of a benign hemangioma doesn't necessarily mean that the patient has a "coagulatory disease" or was on anticoagulant medication. Please modify.

Thank you for the useful comments to improve the paper. Already made revisions.

3. References and typesetting were corrected

Thank you again for publishing our manuscript in the World Journal of Clinical Cases.

Yours sincerely,

Hua Liu
