Jan 01, 2014 - Paraneoplastic focal segmental glomerulosclerosis. A 40-year-old man presented with nephrotic syndrome and subsequently diagnosed with thymoma. The figure shows a normal appearing glomerulus showing segmental collapse and sclerosis containing a trapped foam cell at the periphery with adhesion to the Bowman capsule.

Paraneoplastic syndromes in lung cancer and their ...

<https://atm.amegroups.com/article/view/26458/24906>

Lung cancer is usually associated with paraneoplastic nephrotic syndromes, the most common of which is membranous glomerulopathy (MGN). However, cases of minimal change disease (MCD), IgA Nephropathy, Membranoproliferative glomerulonephritis (MPGN), Focal segmental glomerulosclerosis among others have also been reported.
