---

Dear Editor,

I have reviewed the statistical methods in the manuscript entitled "**A care cascade of recently acquired HCV infection among people living with HIV at a university hospital in Taiwan.**". The statistical methods were adequately used in the analyses including the descriptive distribution and the basic hypothesis testing methods. All results were re-checked by an independent statistical analyst.

Sincerely,

Chin-hao Chang, Ph.D.

Statistical Research Fellow

Department of Medical Research, National Taiwan University Hospital
