SPECIFIC COMMENTS TO AUTHORS

Could you add more information in the text about diagnosis of hyperthyroidism (mechanism)? It would be extremely important to add more information about hospital course of disease - - was it persistent or transient ST-segment elevation - have you any series of ECGs? - how many troponin measurements were done? - have any results of clotting system in this patient? Please describe exactly pharmacological treatment - nothing is mentioned about enoxaparin, dual antiplatelet therapy. Why Polivy was used (polatuzumab???) Explain why "drug treatment was continued for 4 d after the interventional therapy"? (TREATMENT) Explain "left ventricular wall movement was roughly coordinated,..." in OUTCOME AND FOLLOW-UP Delete the section about hypothyroidism and ACS from discussion. Was any functional assessment performed during follow-up period?
