Spontaneous intracranial hypotension associated with ...

<https://jaclinicalreports.springeropen.com/articles/10.1186/s40981-020-00362-3> ▼

Aug 04, 2020 · Spontaneous intracranial hypotension (SIH) is rare but can lead to life-threatening complications including cerebral venous thrombosis (CVT). The concurrence of CVT and SIH raises questions regarding priority. We present the case of a 52-year-old woman who developed sudden left-sided hemiparesis and generalized tonic-clonic seizures. She experienced progressive orthostatic ...

(PDF) A complicated case of intracranial hypotension ...

<https://www.academia.edu/13291563> ▼

Other associated symptoms of SIH include neck stiffness, nausea and vomiting, photophobia, anorexia, general malaise, vertigo, tinnitus, diplopia and other cranial nerve involvement [1][2][3][4][5][6][7][8]. We present a case of complicated SIH and we discuss the appropriate management of such a case.

Spontaneous intracranial hypotension: Clinical and ...

<https://www.sciencedirect.com/science/article/pii/S0720048X07005311>

Feb 01, 2009 · 1. Introduction. Spontaneous intracranial hypotension (SIH) is characterized by the appearance or worsening of preexisting headaches within minutes of change in the body posture, from supine to standing position and improvement or even disappearance of the pain after acquiring the recumbent position.
