Abstract

Streptococcus pneumoniae-associated hemolytic uremic syndrome (HUS) (pneumococcal HUS) is an uncommon condition mainly observed in young children. Early recognition is critical, because of the potential to improve morbidity and mortality. In our review we summarize the pathophysiology, clinical features, diagnostic difficulties and

Hemolytic Uremic Syndrome

Medical Condition

A condition results from the damage of small blood vessels in kidneys. This causes diarrhea, abdominal pain, vomiting and fever.

Very rare (Fewer than 20,000 cases per year in US)

No vaccine available

Requires lab test or imaging

Treatable by a medical professional
