Jan 01, 2018 · We have presented a case of right IPA secondary to colonic perforation caused by a mucin-secreting adenocarcinoma of the colon in an advanced stage. Diagnosing IPA requires a high index of suspicion. A thorough clinical, hematological, and radiological workup is essential to identify the primary cause of secondary IPA.

<https://www.semanticscholar.org/paper/Endoanal...>

Mucinous adenocarcinoma arising in chronic fistula-in-ano is rare, and diagnosing it at an early stage is difficult. The role of endoanal ultrasonography in diagnosing the condition has not been discussed in the study. Herein, we report three cases of mucinous adenocarcinoma arising from anal fistulas in which endosonography played an important role in diagnosing malignant change.
