Jan 01, 2021 - Case report. We present a case report of an 11-year-old girl with an unknown cause of trismus referred to the Oral and Maxillofacial Surgery department at Southern District Health Board in New Zealand. The patient and mother denied any previous history of trauma to the face or any dental treatment being done in the past.

<https://www.scirp.org/journal/paperinformation.aspx?paperid=102822> ▾

Referred pain due to muscular disorders in the medial pterygoid muscle reportedly occurs in the pharynx and the posterior part of the mandible, not in the teeth [6], although we could not confirm this because of the difficulty of performing an accurate tenderness test of the medial pterygoid muscle. Her severe trismus was not odontogenic but appeared attributable to inflammation or a tumor in the head ...
