Cutaneous metastasis from primary gastric cancer: a case ...

<https://pubmed.ncbi.nlm.nih.gov/24818191>

We report a case of cutaneous metastasis from a primary gastric tumor that had been treated 6 years prior. There was no visceral invasion. The patient was treated successfully via a relaparotomy to exclude any macroscopic abdominal recurrence and complete excision of the lesion with a plastic flap to compensate for the tissue lost in the resection. Treatment plans ...

Recurrence of Cutaneous and Lymph Node Metastases 12 ...

<https://www.ncbi.nlm.nih.gov/pubmed/32132333>

Mar 05, 2020 · We herein report a rare case of cutaneous and lymph node metastases that recurred 12 years after radical total gastrectomy for stage IIA gastric cancer. A 62-year-old man had undergone total gastrectomy for stage IIA gastric cancer 12 years earlier without postoperative adjuvant chemotherapy.
