SPECIFIC COMMENTS TO AUTHORS

This is an interesting study of breast cancer characteristics. It is critical that breast cancer patients understand the characteristics of their own cancer, including the stage of the tumor and its hormone receptor and HER2 status. In this study, the authors designed and administered a survey to determining breast cancer patients' knowledge about their own cancer, and the extent to which this information is correct. This study is well designed and the results are very interesting. The survey is reasonable, and analysis of the cancer characteristics are good. Minor comments: 1. There are some minor language polishing, which should be checked and corrected. 2. The discussion and conclusion section should be divided to two parts. 3. Tables should be also edited.
