ISCHEMIA trial: How to apply the results to clinical practice

Rafael Vidal-Perez, Alberto Bouzas-Mosquera, Jesus Peteiro, Jose Manuel Vazquez-Rodriguez

Abstract

During the last years two questions have been continuously asked in chronic coronary syndromes: (1) Do revascularization procedures (coronary artery bypass grafting or percutaneous coronary intervention) really improve symptoms of angina? and (2) Do

Ischemia or ischaemia is a restriction in blood supply to tissues, causing a shortage of oxygen that is needed for cellular metabolism. Ischemia is generally caused by problems with blood vessels, with resultant damage to or dysfunction of tissue. It also means local anemia in a given part of a body sometimes resulting from constriction. Ischemia comprises not only insufficiency of oxygen, but also reduced availability of nutrients and inadequate

Jun 01, 2021 · **Addressing** cardiovascular risk factors with lifestyle modifications is an essential part of the treatment plan. The application of the ISCHEMIA trial results of moderate to severe ischaemia seen in chest pain clinics should strengthen the argument for initial optimal medical management offering an invasive strategy on an individual patient level.

May 01, 2020 · Therefore, we believe that it is premature to change **clinical practice** in view of **the results** of **ISCHEMIA trial**. As stable CAD patients is a vastly heterogenous patient group, it may be prudent to **apply** common **clinical** judgement and individual decision-making according to current guidelines before changing our management strategies.

Ischemia or ischaemia is a restriction in blood supply to tissues, causing a shortage of oxygen that is needed for cellular metabolism. Ischemia is generally caused by problems with blood vessels, with resultant damage to or dysfunction of tissue i.e. hypoxia and microvascular dysfunction. It also means local anemia in a given part of a body sometimes resulting from constriction. Ischemia comprises not only insufficiency of oxygen, but also reduced availability of nutrients and inadequate removal of metabolic wastes. Ischemia can be partial or total.
