### Retroperitoneal bronchogenic cyst: report of a case and ...

<https://pubmed.ncbi.nlm.nih.gov/10355969>

A large cystic mass was found in the subdiaphragmatic region of a 46-year-old woman who had complained of continuous pain in the left flank . The **cyst** was located in the retroperitoneum just below the diaphragm and was adhered to the diaphragmatic skeletal muscle and abdominal aorta, but was separate from the spleen, pancreas, left adrenal gland and left kidney.

Introduction

Neoplastic Cysts

Nonneoplastic Cysts

Conclusions

**Retroperitoneal cystic** masses, which arise within the **retroperitoneal** space but outside the major organs within that compartment, are uncommon. However, the widespread use of computed tomography (CT) for evaluating abdominal and **retroperitoneal** diseases has increased the detection rate for **retroperitoneal cystic** lesions. Because the clinical implications of and therapeutic strategies for **retroperitoneal cystic** masses vary depending on the cause, the ability to noninvasively differentiate bet...

### A case report- retroperitoneal bronchogenic cyst in ...

<https://www.sciencedirect.com/science/article/pii/S2210261220307100>

Jan 01, 2020 · Retroperitoneal bronchogenic cysts occur almost equally in men and women. CT and MRI are found to be ideal imaging modalities. Surgical resection of these lesions is recommended. Laparoscopic surgery is preferred. Only one case of a retroperitoneal bronchogenic cyst associated with the development of adenocarcinoma has been reported.

Dec 14, 2014 · The first report of a retroperitoneal bronchogenic cyst was described in 1953 by Miller et al.<sup>7</sup> These tumors are com-monly located in the thoracic cavity and retroperitoneal lo-calization is extremely rare. The peripancreatic region<sup>8</sup> and the left adrenal gland<sup>9</sup> are the most common localizations of the bronchogenic cysts placed in the retroperitoneum.
