Safety of direct endoscopic necrosectomy in patients with ...<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4877532>

May 25, 2016 · INTRODUCTION. Pancreatic walled-off necrosis (WON) may result from acute necrotizing pancreatitis. Direct endoscopic necrosectomy (DEN) has emerged as the treatment of choice supported by high resolution and low complication rates for WON[1-4]. In the patient with WON resulting from acute necrotizing pancreatitis, the presence of gastric varices must be carefully considered, as ...

Endoscopic Management of Giant Walled-Off Pancreatic ...

<https://pubmed.ncbi.nlm.nih.gov/31737728>

Walled-off pancreatic necrosis (WOPN) is one of the late complications of acute pancreatitis. We present a 37-year-old man who developed a large WOPN 6 weeks after treatment of severe complicated pancreatitis. Imaging studies revealed a necrotic retroperitoneal fluid collection measuring 27 × 12 × 27 cm with large crossing blood vessels.
