Abscess

Medical Condition

Bacterial infection commonly leads to abscess formation

Abscess

- Smooth swelling under skin
- Pain and tenderness
- Pus buildup

A tender mass filled with pus caused due to infection. The abscesses can develop in any part of the body. They are usually red, warm and painful.

🏠 Common (More than 200,000 cases per year in US)

👨‍⚕️ Often requires lab test or imaging

📖 Treatable by a medical professional

Maydl hernias (alternative plural: **herniae**) are defined as the presence of two small bowel loops within a single hernial sac, that is, there are two efferent and two afferent loops of bowel, forming a "W" shape. Hence sometimes known as a **W hernia** or a **hernia-in-W**. This type of **hernia** is more prone to strangulation and **necrosis**. The intervening intra-abdominal loop is also at risk of a closed ...

[Littre meets de garegeot: meckel's diverticulum and ...](#)

<https://www.ncbi.nlm.nih.gov/sites/ppmc/articles/PMC4188338>

Littre's and de Garegeot hernias are rare operative findings, the former describing the presence of a Meckel's diverticulum in a hernia sac and the latter describing the presence of the vermiform appendix in a femoral hernia. The finding ...

<https://www.semanticscholar.org/paper/Hérnia-de...>

De Garegeot hernia is defined by the presence of a femoral hernia with incarceration of the appendix. Appendix endometriosis is an uncommon association, whereby diagnosis is almost always obtained through the anatomopathological analysis of the surgical piece. We report the case of a 38 year old female patient that presented with abdominal pain, hyporexia, nausea and subfebrile spikes upon ...

[\[PDF\] De Garegeot's Hernia: A rare presentation of an ...](#)

<https://www.semanticscholar.org/paper/De-Garegeot...>

Introduction: De Garegeot's hernia; the presence of a vermiform appendix in the femoral hernia sac, is a rare occurrence. Due to the paucity of cases and no large case series yet published, the incidence of De Garegeot's hernia is reported between 0.5–5%. Femoral hernias account for less than 5% of all groin hernias and are three times more common amongst females and amongst the elderly.

<https://pdfs.semanticscholar.org/f644/d5889cc10aadba75916879b024d0ff40bd83.pdf>

We report about a case of a femoral hernia with vermiform appendix herniation presenting without abdominal pain and bowel symptoms. Femoral appendix hernia was first described by Rene Jacques de Garegeot in 1731 [de Garegeot hernia (GH)] and is a rare clinical finding [3]. This condition has been reported in literature, primarily in the form ...
