

PEER-REVIEW REPORT

Name of journal: *World Journal of Clinical Cases*

Manuscript NO: 67559

Title: Predictive risk scales for development of pressure ulcers in pediatric patients admitted to general ward and intensive care unit

Reviewer's code: 03629470

Position: Peer Reviewer

Academic degree: MD

Professional title: Docotor

Reviewer's Country/Territory: India

Author's Country/Territory: China

Manuscript submission date: 2021-06-19

Reviewer chosen by: AI Technique

Reviewer accepted review: 2021-06-26 08:41

Reviewer performed review: 2021-07-01 09:41

Review time: 5 Days and 1 Hour

SPECIFIC COMMENTS TO AUTHORS

Title of the study seems insufficient. Abstract can be made better summarizing the study. `Intervene` keyword is not required. Discussion can be improved by adding details comparing the present study with other published data. The authors have studied the predictable factors for development of pressure ulcers in paediatric patients admitted in ward and ICU. They have compared three different scales and presented their opinion. The study seems relevant and could be of value to the readers, although not new but it signifies the role of these scales in predicting a debilitating condition. As suggested by the authors too, this requires a large scale multicentric study to give definite results and recommendations.
