Burnout and work-family conflict among nurses during the ...<https://www.sciencedirect.com/science/article/pii/S2095771817300130>

Mar 01, 2017 · A study 10 in Guangzhou showed nurses' overall average score of work-family conflicts was 50.71 ± 9.05 . Li's research 14 showed that overall average score of nurses' work-family conflicts was 53.31 ± 11.94 , while the results of the current study reached a higher score of 55.19 ± 9.27 . The bi-directional characteristic of work-family conflicts explained why the time dimension received the highest score over other dimensions in both work-to-family and family-to-work conflicts ...

Barriers to work-life balance for hospital nurses

<https://pubmed.ncbi.nlm.nih.gov/25994973>

Barriers to work-life balance for hospital nurses. Nurses are loyal to their patients and coworkers. They often put the needs of others before their own and sometimes even before the needs of their families. This concern for others can cause conflicts that manifest as stress.

Work Stress and Burnout Among Nurses: Role of the Work ...

<https://www.ncbi.nlm.nih.gov/books/NBK2668>

Burnout is typically conceptualized as a syndrome characterized by emotional exhaustion, depersonalization, and reduced personal accomplishment. 12 Work life, however, is not independent from family life; these domains may even be in conflict. 13, 14 Stress may result from the combined responsibilities of work, marriage, and children. 15–17 The effects of both work and nonwork stress among nurses have been studied infrequently. 18 And yet, nonwork stress ...
