Title: Clinical study of the modified Gant procedure for the treatment of internal rectal prolapse in elderly women

Author: Peng-Peng Xu, Yong-Hong Su, Yan Zhang, Tong Lu

Name of Journal: World Journal of Clinical Cases

Manuscript NO: 68078

First, thank you for your careful guidance of this article. Revision has been made according to the suggestions of the reviewer:

Reviewer: 06099628

Intrarectal prolapse tends to affect older women most often. Some patients need surgical treatment when conservative treatment does not improve the condition. Serious complications such as anastomotic fistula, rectal stricture and pelvic infection may occur despite the many surgical options for IRP. Elderly patients are often complicated with medical diseases and have low tolerance for surgery. This study explored a new kind of operation with a reliable curative effect, few postoperative complications and easy tolerance by elderly women with intrarectal prolapse. This study is very interesting, the results are well displayed and well discussed. Minor comments: 1. Some minor language polishing should be corrected. 2. A conclusion should be added to the main text. 3. References should be edited according to the journal's style.

After receiving the comments, we read the article carefully and found some small loopholes in the language of the article and made modifications. I added a conclusion section. Edited the chart. And I changed the style of the references.

According to the suggestion, we changed the relevant description.

Thank you again for publishing our manuscript in the World Journal of Clinical Cases.

Sincerely Yours,

Yong-Hong Su
