Mar 13, 2017 · Diffuse large B-cell lymphoma (DLBCL) is the most common NHL subtype, representing 25%–30% of all lymphomas. DLBCL tends to be aggressive and often involves extranodal sites (2 , 4). Extranodal marginal zone lymphoma (EMZL) of mucosa-associated lymphoid tissue (MALT) is another subtype that commonly affects the lung (2 , 3).

Introduction

Case Report

Materials and Methods

Diffuse large B-cell lymphoma is extranodal in approximately 40% of cases, arising in nearly any organ system. DLBCL involvement of soft tissue and in particular **skeletal muscle** is extremely rare, comprising less than 1% of all extranodal non-Hodgkin lymphomas (NHL). We report a case of a 79-year-old man that presented with a DLBCL of the left triceps. In particular, we describe an unusual histologic appearance of pseudoglandular structures, resembling adenocarcinoma. We performed a review of lym...
