statementsConflicts-of-Interest: [] Yes [**Y**] No**SPECIFIC COMMENTS TO AUTHORS**

The manuscript reported a rare case of DLBCL involving multiple muscles and soft tissue and easily confused with soft tissue inflammation. This case highlights that skin invasions of aggressive lymphoma should be considered if there is a soft tissue infection that is unresponsive to antibiotics or progresses rapidly. However, it would be better if the authors introduce the characteristics of DLBCL involving multiple muscles and soft tissue by abdominal wall and soft tissue ultrasound examination, which is clinically the method of choice for abdominal pain, soft tissue pain, etc.
