Depression following hip fracture is associated with ...<https://bmjgeriatr.biomedcentral.com/articles/10.1186/1471-2318-13-60>

Jun 17, 2013 - In the current study, depression post-hip fracture was associated with poorer ADL and slower walking speed six weeks and six months post-hip fracture. Depressed participants also had significantly poorer physical functioning, as reflected in lower Berg Balance scale scores at week 6.

Depressive symptoms post hip fracture in older adults are ...

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4307912>

Dec 16, 2014 · In the present study, we have reported that new onset depression results in both **phenotypic and functional alteration in peripheral T cells** in elderly hip fracture patients. Firstly, we report a decline in T cell frequency and absolute numbers in hip fracture patients with depressive symptoms compared with healthy controls, which is in agreement with previous reports of reduced ...
