#### **SPECIFIC COMMENTS TO AUTHORS**

A concise, comprehensive, easy to read and well structured case report. I think it is important to debate/underline a little bit more about the patient's history of facial vascular anomalies. Did these vascular anomalies are connected with the development of the bulging mass located on the hard palate? Did you consider a maxillo-facial surgery evaluation? Likewise, I suggest to check the English consistency of the manuscript. There are several grammatical/spelling errors throughout the manuscript.
