

PEER-REVIEW REPORT

Name of journal: World Journal of Clinical Cases

Manuscript NO: 68578

Title: Clinical electroencephalogram characteristics and treatment outcomes in children with benign epilepsy and centrotemporal spikes

Reviewer's code: 06110766

Position: Peer Reviewer

Academic degree: MD

Professional title: Doctor

Reviewer's Country/Territory: Poland

Author's Country/Territory: China

Manuscript submission date: 2021-07-06

Reviewer chosen by: AI Technique

Reviewer accepted review: 2021-07-12 12:12

Reviewer performed review: 2021-07-23 01:14

Review time: 10 Days and 13 Hours

SPECIFIC COMMENTS TO AUTHORS

Electroencephalograms are an important external validator of normal brain structure and function and useful to detect some brain alterations. The primary purpose of antiepileptic treatments is to completely control epileptic seizures, while simultaneously considering prevention, control and improvement of cognitive and behavioral dysfunction, of great significance for improving the patients' intellectual development and quality of life. In this study, the clinical electroencephalograms characteristics of children with benign epilepsy and centrotemporal spikes were analyzed, and the children's treatment and outcomes also discussed. This study is well designed. The methods are clearly described. The inclusion and exclusion criteria are reasonable. The results are discussed with updated references. The reviewer suggests to accept this study after a minor editing. A short background should be added to the abstract, and please update the image, the image is not in a high-resolution ratio.
