Should people with chronic liver diseases be vaccinated against COVID-19?

CLD people vaccinated against COVID-19

Abstract

Hepatic impairment in coronavirus disease 2019 (COVID-19) may derive from cholangiocyte damage in the beginning, but not from direct infection of hepatocytes. Chronic liver disease patients co-infected with SARS-CoV-2 exhibited overexpression of ACE2 receptors and overwhelming cytokine storm. Consensus has been reached that we should encourage as many people as possible to be vaccinated in order to achieve herd immunity. SARS-CoV-2 vaccines can prevent or alleviate severe infection and cytokine storm. It is recommended that all adult patients with chronic liver diseases and

Should People With Liver Disease Get The COVID Vaccine ...

<https://www.ideastream.org/news/should-people-with...> ▾

Feb 01, 2021 • People with certain medical conditions caused by liver disease may actually be at increased risk of severe COVID-19 infections, according to the CDC, so getting the vaccine may help protect this population even more. As always, talk to your doctor if you have concerns about specific medical conditions.
