#### **SPECIFIC COMMENTS TO AUTHORS**

1. The patient's troponin and CK-MB values (baseline and following) must be given. 2. ECG is normal. Is the patient's AMI non-ST-AMI? if ST-elevated-MI adds the ECG showing elevation. Detail the cardiac event in the case report. 3. Figures 1, 2 and 3 are redundant, delete them, should be provided a cardiac angiography image and ECG figure. 4. Add the following recent article on the subject to the discussion. doi: 10.1007/s10067-020-05354-3. 5. The authors should also mention the relationship between thalidomide and AMI.
