HUGE ABDOMINAL MASS WITH HEMATOCOLPOMETRA DUE TO ...

jcmc.cmc.edu.np/index.php/jcmc/article/view/166 ▼

Jun 25, 2020 · We report an unusual case of 12- year old girl with a huge mass in the lower abdomen examination **revealed imperforate hymen** at early pubertal age. Further investigation of Magnetic Resonance Imaging (MRI) confirmed **hematocolpometra**. Then, she underwent simple hymenotomy and drainage of collected menstrual blood from the genital tract.

Diagnosis

Causes

Treat

An imperforate hymen is a congenital disorder where a opening completely obstructs the vagina. It is caused by the hymen to perforate during fetal development. It is most commonly diagnosed in adolescent girls when menstrual blood accumulates in the vagina, sometimes also in the uterus. It is treated by surgical incision of the hymen.
