Surgery: Theco-Thecal Shunt for Dorsal Syringomyelia secondary to tuberculous arachnoiditis
Principal (VP) and Secondary Shunt [Life Boat](t-p) technique [explained to relatives in simple
vernacular]

Consent for Surgery and Use of Clinical and Operative Photographic Data of patient for educational
purposes

Guarded Prognosis, Delayed Recovery/Deterioration/Need for reoperation Explained

21.9.2019

We relatives of patient Sanjit Rai give consent for the above surgery of Theco-Thecal Shunt. The procedure, its novelty and its possible positive and negative effects and related issues have been discussed with us in details. The principles behind the procedure have been discussed in simple language . Possibilities of delayed recovery till the syrinx subsides by natural mechanisms, csf leak inspite of all precautions, meningitis, need for re-repair, need for redo have been clearly told. Deterioration in clinical condition and bowel bladder function has also been informed. We understand that clinical and operative photographic material of the procedure and patient may be used for educational and publication purpose and we fully consent for the same. We reconfirm our consent for the above procedure.
