SPECIFIC COMMENTS TO AUTHORS

The paper is logically organized and well written and the limitation are correctly reported by authors. The manuscript meets the requirements of biostatistics as per uploaded statement. The pandemic has improved some findings and the suggested relationship deserves attention. Would recommend to improve the ideas and basis of pandemic situation but also what can explain patho/physiological base, in the setting of transplanted patients and clinical outcomes, quoting: Postmortem Findings Associated With SARS-CoV-2: Systematic Review and Meta-analysis.
