SPECIFIC COMMENTS TO AUTHORS

Trans-ileocolic endovascular treatment for severe acute portal vein thrombosis with bowel necrosis: Two case reports of hybrid treatment Manuscript Type: CASE REPORT Acute and chronic PVT is a rare condition with multiple etiologies. The grades of severity were described and also the technique used. Comparably little information was given to the etiologies of PVT and the influence of the etiologies on necrotic intestinal tissue. The authors repeatedly used the term “study” but case report might be the adequate description. The discussion might appear to general for the description of two cases. The very specific two case reports focusing on the “severity” of PVT treatment techniques but lacking additional important information on the differential diagnosis of other ischemic intestinal diseases and how to handle acute portal vein thrombosis of different etiologies.

SPECIFIC COMMENTS TO AUTHORS

Nice approach and management for portal vein thrombosis leading to bowel necrosis. However, I suggest to modify the title to indicate that it was a hybrid approach in the first part of the title, so that the reader won't be mislead.
