SPECIFIC COMMENTS TO AUTHORS

Good summarization of the anti-diabetic drugs. No bias was found from the authors toward a specific type. However, there are some minor adjustments need to be made. For example, the proper use of punctuation mark need to be revised as there are many sentences are not separated correctly. Also there are comments within the manuscript which I have highlighted for consideration. Lastly, It would be important to add a brief paragraph about the studies which investigated the effect of antidiabetic drugs and resistance exercise on T2DM patients with sarcopenia.
