-------------------------------------	---

SPECIFIC COMMENTS TO AUTHORS

This article needs to be redone in its entirety referring to the CARE checklist 2016 and respecting the formats of case report submitted in the WJCC journal. you don't need to report everything that has been described in the literature, you need to focus on the aims of the topic and the message you want to give to the scientific community in short and precise words. you must specify the highlights of your topic based on what is known in the literature, specifying the novelties and the takehome lesson from your case

Thanks

SPECIFIC COMMENTS TO AUTHORS

Advantages: This is a novel finding in clinical practice. An unintentional discovery during treatment. Numerous studies have been conducted to explore the hypothesis that antibiotics and glucocorticoid can be used to control AML instead of chemotherapy. This is an interesting observation that ought to be recorded in the literature. Limitations: - An excessive number of references (80) dilutes the discussions with a case report. The author should select between 15 - 30 articles that are directly linked to this subject. - The discussion should focus on the case's findings.
