SPECIFIC COMMENTS TO AUTHORS

In this study, clinical, radiological and histological features of a rare and unusual location of the capillary hemangioma were described. It is the first report of capillary hemangioma in the mandibular vestibule. I suggest a further discussion of the pathogenesis of intraoral hemangioma, if there are relevant research advances. As mentioned in the manuscript, "Capillary hemangioma is a common lesion, but it rarely occurs in the oral cavity. According to Matsumoto et al., 45.2% of capillary hemangiomas occurred on buccal mucosa, 35.5% on the tongue, and only a small percentage occurred in the lip, gingiva and palate[4]." Therefore, a summary of the literature on intraoral hemangioma would further enhance dentists' understanding of the disease.

SPECIFIC COMMENTS TO AUTHORS

This article reports a rare case---hemangioma in the lower labial vestibule 。 This article reminds us that although it is extremely rare for hemangioma to occur in the oral cavity, it is necessary to consider the diagnosis of hemangioma when there is a red-bluish isolated mass in the oral cavity.
